***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-40, drawn to a MEMS suspensions system with a plurality of beams, classified in class 310, subclass 309.
  - II. Claims 41-47, drawn to a method of supporting a MEMS with spring and tensile force, classified in class 310, subclass 309.
  - III. Claims 48-61, drawn to a MEMS suspension system with non-linear linkage resistance.
2. Inventions Group I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the beam system of Group I does not require the force vectors of Group II and the method of supporting the MEMS of Group II does not require the beam system of Group I.
3. Inventions Group I and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention of Group I has separate utility such as an actuator without the non-linear linkage of Group III AND the suspension assembly of Group III does not requires the lateral beam assembly of Group I.
  - I. See MPEP § 806.05(d).

Art Unit: 2834

4. Inventions Group II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention of Group II has separate utility such as a method without the non-linear linkage of Group III AND the suspension assembly of Group III does not requires the force vectors of Group II. See MPEP § 806.05(d).

5. Because these inventions are distinct for the reasons given above and the Lateral beam search required for Group I is not required for Groups II and III, restriction for examination purposes as indicated is proper. Additionally the force vector search of Group II is not required for Group I and III, while the non-linear linkage of Group III is not required of Groups I and II.

6. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
